Computer aided design or CAD is an important industry within the tech world. It involves utilizing computers to help with engineering and design for a wide range of projects. Common types of computer aided design include metal fabrication, carpentry, and 3D printing, as well as others that have impacted modern manufacturing and other business processes.

Computer-Aided Design is a leading international journal that provides academia and industry with key papers on research and developments in the application of computers to design. Computer-Aided Design invites papers reporting new research, as well as novel or particularly significant applications, within a wide range of topics, spanning all stages of design process from concept creation to manufacture and beyond.
