Microorganisms are ubiquitously present in petroleum reservoirs and the facilities that produce them. Pipelines, vessels, and other equipment used in upstream oil and gas operations provide a vast and predominantly anoxic environment for microorganisms to thrive. The biggest technical challenge resulting from microbial activity in these engineered environments is the impact on materials integrity. Oilfield microorganisms can affect materials integrity profoundly through a multitude of elusive (bio)chemical mechanisms, collectively referred to as microbiologically influenced corrosion (MIC). MIC is estimated to account for 20 to 30% of all corrosion-related costs in the oil and gas industry. This book is intended as a comprehensive reference for integrity engineers, production chemists, oilfield microbiologists, and scientists working in the field of petroleum microbiology or corrosion. Exhaustively researched by leaders from both industry and academia, this book discusses the latest technological and scientific advances as well as relevant case studies to convey to readers an understanding of MIC and its effective management.

Emphasizing effective, state-of-the-art methodology and written by recognized experts in the field, the Handbook of Food Analytical Chemistry is an indispensable reference for food scientists and technologists to enable successful analysis. * Provides detailed reports on experimental procedures * Includes sections on background theory and troubleshooting * Emphasizes effective, state-of-the-art methodology, written by recognized experts in the field * Includes detailed instructions with annotated advisory comments, key references with annotation, time considerations and anticipated results

Analytical Methods for Pesticides and Plant Growth Regulators. Volume XVI: Specific Applications presents analytical methodology for insecticides (ethoprop, fenoxycarb, fenvalerate) and five herbicides (chlorimuron ethyl, chlorsulfuron, glyphosate, metsulfuron methyl, sulfometuron methyl). The book discusses the determination of two important pesticide classes, anticoagulant rodenticides and fumigants, and the determination of other pyrethroid. Toxicologists and people involved in pesticide analysis will find the text invaluable.

Proceedings of the 50th Industrial Waste Conference is the only comprehensive documentation of the entire seminar. It is an overview of the current state of hazardous waste identification, management and disposal.

Recent advances in our understanding of cells have put cell biology at the centre of biological and medical research. Covers traditional and recently developed techniques and includes the detail necessary for immediate application in the laboratory.
