A lip-taping regimen can narrow the gap in the child's cleft lip. A nasal elevator is used to help form the correct shape of the baby's nose. A nasal-alveolar molding (NAM) device may be used to help mold the lip tissues into a more favorable position in preparation for the lip repair. The first surgery, to close the lip, usually occurs when the

In general, procedures may include: Cleft lip repair. To close the separation in the lip, the surgeon makes incisions on both sides of the cleft and creates flaps of tissue. The flaps are then stitched together, including the lip muscles. The repair should create a more normal lip appearance, structure and function.
