Based on in-depth interviews with 32 convicted male sex offenders attending three different treatment programmes, this text explores sex offenders' perspectives on the way they are treated and managed.

This title was first published in 2002: Loosely divided into two sections, this book's first part includes chapters which explore young people's identities and youth cultures in relation to issues such as drug use, education and dance music. In various ways, the authors examine whether there is a need to rethink the existing theories and concepts which have informed the study of youth cultures and identities. The second part to the volume is concerned with how young people experience "transitions", in relation to such topics as employment, sexuality, and household formation. The chapters also raise theoretical questions on the usefulness of the transition concept in late modernity, illustrating how the reshaping of key institutions in late modernity has had a profound effect on the sorts of transitions young people make today. In addressing such issues the authors examine the potential contribution that concepts around risk and risk society and new Third Way social policy initiatives can have to contemporary youth studies.

This book aims to explore sex offenders' perspectives of the way they are treated and managed. Whilst a great deal has been written about sex offenders and their treatment within the criminal justice system, few studies have approached the issues through an understanding of offenders' own views and perspectives on their offending behaviour and others' responses to it. This book aims to redress this imbalance. The book is based on in-depth interviews with 32 convicted male sex offenders attending three different sex offender treatment programmes (the prison based Sex Offender Treatment Programme, Behaviour Assessment Programme and the community-led Sex Offender Groupwork Programme). Through gaining an understanding of offenders' perceptions of initiatives designed to both treat and control their risk of future offending, Offending Identities at the same time helps us to evaluate the effectiveness of such schemes.

"Cole excavates the forgotten and hidden history of criminal identification--from photography to exotic anthropometric systems based on measuring body parts, from fingerprinting to DNA typing."--Jacket.

Based on a survey conducted in five California prisons during July and August 1976, this study explores criminological issues concerning the number of crimes committed by offenders, the characteristics of high-rate "career" criminals, and the associations between these characteristics and the crimes themselves. The survey of 624 incarcerated male felons is the first known examination of these issues using offender-provided information from a large sample. It provides new information on offenders' descriptions of their crimes, their involvement with criminal justice agencies, the reasons they offer for their crimes, and their perceptions of and attitudes toward crime and the criminal justice system. It also describes the relationship between crime rates and three kinds of self-reported information: personal characteristics--age, race, drug use; experience with the criminal justice system--prior criminal record, current conviction offense, juvenile record; social-psychological characteristics--self-concept, motivation, attitudes about crime, perception of the payoffs of crime, and economic, residential, and marital status.
