Space Medicine In Project Mercury, Introduction. Introduction. THE DECISION OF THE UNITED STATES in 1958 to initiate a manned space flight program was based upon the confident assumption that technology could provide the life-support systems necessary for human survival in the hostile space environment. Primary responsibility for developing these flight systems obviously would rest with physical scientists and engineers.

Space Medicine In Project Mercury, Introduction

Space Medicine In Project Mercury, CH7-2. Medical Monitors. As early as October 29, 1959, Dr. Stanley C. White, STG, had noted in a memorandum for the Project Director that as Mercury moved into actualmanned operations, there would be "fairly con-siderak requirements foradditional medical support in monitoring recovery, and post-flight researchand support."

Space Medicine In Project Mercury (Illustrated & Annotated) ...

As early as the winter of 1958-59, the Space Task Group, with the assistance of the Launch Officer as-signed to STG, had developed a basic recovery plan. In early Spring of 1959, a joint NASA-DOD working group was established to develop these plans in more detail. ... Ashton Graybiel, "Aerospace Medicine and Project Mercury-Navy Participation ...

Space Medicine In Project Mercury, CH7-5

The basic reasoning behind this idea was the fact that little was known about the effects of combinations of high stresses such as would occur in the Project Mercury missions. At this briefing, representatives of the Space Task Group had pointed out that animal flights were involved in the program, but that the flights were "oriented directly at the Mercury objectives," that is, testing the ...

Space Medicine In Project Mercury, CH6-5 Astronaut Participation In Engineering Design And Testing By the spring of 1959 it had become apparent that as the design and construction of the manned spacecraft proceeded, considerable coordination of Space Task Group effort would be required to monitor the McDonnell contract adequately.

Space Medicine In Project Mercury, CH6-5

Space Medicine In Project Mercury, CH5-8 Medical Aspects Of Training On April 27, 1959, Project Mercury was assigned the highest national priority. Two weeks later, on May 12, NASA announced a training program for the seven astronauts "to provide them with the technical knowledge to pilot the nation's manned orbital capsule."

Space Medicine In Project Mercury, CH5-8

Indeed, from the viewpoint of environmental medicine as an applied science, Project Mercury marked the swift transition from what had come to be known as aviation medicine to what is now recognized as space medicine.

Space Medicine In Project Mercury (Illustrated & Annotated) ...

Project Mercury – The Dawn of Space Medicine Autoinjectors carried on the Mercury-Atlas 9 flight. The injectors provide the astronaut with injection tubes of Tigan, for preventing motion sickness and Demerol, for relieving pain. The single injection tubes were placed in a pocket of the astronaut's space suit (Credits: NASA).

Evolution of NASA Medical Kits: From Mercury to ISS

Space medicine is the practice of medicine on astronauts in outer space whereas astronautical hygiene is the application of science and technology to the prevention or control of exposure to the hazards that may cause astronaut ill health. Both these sciences work together to ensure that astronauts work in a safe environment. The main objective is to discover how well and for how long people ...

Space medicine - Wikipedia

celestial mechanics, aerospace medicine, and electronics, Project Mercury took man beyond the atmosphere into space orbit. It confirmed the potential for man's mobility in his universe. It remains for Projects Gemini and Apollo to demonstrate that potential. Project Mercury was not only a step in the history of flight technology, it was a

Alternative Title: Project Mercury. Mercury, any of the first series of crewed spaceflights conducted by the United States (1961–63). The series began with a suborbital flight about three weeks after the Soviet cosmonaut Yuri Gagarin became the first human in space (see Vostok). Alan B. Shepard, Jr., rode a Mercury space capsule dubbed Freedom 7 on a 486-km (302-mile) flight of 15-minute duration, attaining a maximum altitude of 186 km (116 miles).

Mercury | Missions & Facts | Britannica

The Mercury spacecraft was designed for this project. It was a small capsule with room for one astronaut. The astronaut stayed in his seat during the flight. Two types of rockets were used for Project Mercury.
