In To Forgive Design he surveys some of the most infamous failures of our time, from the 2007 Minneapolis bridge collapse and the toppling of a massive Shanghai apartment building in 2009 to Boston's prolonged Big Dig and the 2010 Gulf oil spill. These avoidable disasters reveal the interdependency of people and machines within systems whose complex behavior was undreamt of by their designers, until it was too late.

To Forgive Design: Understanding Failure: Petroski, Henry ...

Petroski writes almost an ode to failure: why it happens, why it must be studied and why we must always welcome it. It is through failure that things are learned and designs improve. Petroski looks at failure in a very broad sense: not just failure of design or technology but of all of the human decisions that come into play when massive projects - like bridges or shuttles - are put together.

Engineers are always striving for success, but failure is seldom far from their minds. In the case of Canadian engineers, this focus on potentially catastrophic flaws in a design is rooted in a failure that occurred over a century ago. In 1907 a bridge of enormous proportions collapsed while still under construction in Quebec.
